# DIGITAL MEDIA & GAMING

## ABOUT THIS SECTOR

Digital media and gaming applications are at the cutting edge of user experience technology. The increasing capabilities of the web, high-tech devices and mobile technology provide enormous potential for engaging users in innovative ways of interaction with state-of-the-art interfaces.

In such a fast paced industry where the next generation of gaming and interactive technology is being developed today, tax relief opportunities are invaluable in providing useful cash flows to support these ever evolving technologies.

## POTENTIAL R&D CLAIMS

Many companies are conducting qualifying R&D activities for R&D tax relief purposes in this sector on a daily basis without even realising it. What may seem as typical day-to-day challenges in the office and field may qualify. This may include developing new products, processes or services or duplicating existing products and processes in an appreciably improved way. The development does not have to be blue sky innovation, however, it is necessary for the company to demonstrate some kind of technical uncertainty in the work being undertaken.

Typical qualifying activities within this sector include but are not limited to;

- Development of a 4K graphical computer game which required efficient coding to minimise the number of computations per second the processor needed to make.
- The release of a new games console which meant that an entire series of games had to be recoded for use on the updated version.
- A digital marketing campaign system which uses sophisticated analytics built around complex algorithms to determine the optimum strategy for effective marketing.

## POTENTIAL PATENT BOX CLAIMS

Companies that hold patents could qualify for a reduced effective corporation tax rate of 10% on profits derived from those patents. Any company in this sector which does not hold a patent should be reviewing their technological developments to consider their eligibility to apply for a patent and benefit from the significantly reduced 10% tax rate.

The technical hurdle to apply for a patent is not as high as you may think. Similar to R&D tax relief, what may seem as typical technology in the office or field may be patentable and eligible for a 10% effective rate of tax.

Generally, patents would be associated with hardware such as televisions, games consoles or smartphones. There are countless examples of patentable technologies that have emerged in recent years in this technology sector. The sale of such items incorporating a patent would attract a reduced corporation tax rate of 10% on qualifying profits.

## YES! THERE'S MORE!

Video Games Tax Relief (VGTR) is a HMRC scheme that allows UK game developers to apply for tax relief funding. The computer game must qualify as being British under the Video Games Cultural Test which is administered by the British Film Institute (BFI).

To be eligible for VGTR, the company must be responsible for the majority of the planning, designing, developing, testing and producing of the game. At least 25% of the eligible costs must be incurred in the European Economic Area.

## POTENTIAL CAPITAL ALLOWANCE CLAIMS

Capital allowances enable commercial property owners to obtain tax relief relating to capital expenditure embedded within their building.

Capital allowances on plant and machinery such as computers, desks, & telephones will typically be claimed in the tax computation already.

However, many businesses in this sector are missing out on valuable capital allowances available not only on commercial property owned for years, but also on the;

- Acquisition
- Construction
- Refurbishment; or
- Extension of their commercial property.

The value of capital allowances on commercial buildings can be as high as 45% of any purchase or refurbishment price.

## DON'T LOSE OUT!

Of course, the extent of the opportunity depends on the level of the specification.

The main reason allowances are missed on the construction and fit out/ refurbishment of the building is because of the lack of detail in the construction cost information provided by contractors. This information can consist of high-level summaries of the works and it is difficult for non-specialists to break down and segregate these costs which can result in lost allowances.

Typically, elements missed in the capital allowances claims include demolitions, alterations and finishes. Also, professional fees associated with plant and machinery on which we are claiming capital allowances are eligible, but are easily forgotten.

## YES! THERE'S MORE!

In addition to this, there is a little-known capital allowances pool called Research and Development Allowances (RDA's). If it can be identified that the purpose of the expenditure on plant and machinery, buildings and IT equipment was for the purpose of R&D, 100% uncapped first year capital allowances can be claimed on this expenditure.

## SAY YES!

Let YesTax unlock your hidden qualifying expenditure. We are approachable, proactive and productive.

Our qualified experts will arrange a no obligation call to outline the process and assess the extent of your opportunity – you just have to say **YES!**

## NO SAVING, NO FEE – YES!

We're flexible, but typically we work on a contingent fee basis. Therefore, if YesTax is unable to identify any saving for you, there is no fee due!
